Professional Summary

Computer Science graduate with hands-on experience in data science, machine learning, and data analysis using Python. Skilled in building predictive models and NLP applications using Scikit-learn, TensorFlow, and PyTorch, with experience deploying ML models on Amazon SageMaker and using Google Gemini API.

Education

Chalapathi Institute of Engineering and Technology
BTech in Computer science and Engineering
GPA: 7.9

Guntur, Andhra Pradesh
September 2020 - April 2024

Intermediate
Noble Sai Junior College
GPA: 9.13

Dachepalle, Andhra Pradesh
June 2018 - Feb 2020

SSC(10th)
ZP High School
GPA: 9.7

Dachepalle, Andhra Pradesh
June 2017 - Mar 2018

Experience

AI/ML Virtual Intern

May 2023 – July 2023

- Developed and deployed 3 supervised ML models on AWS SageMaker with real-world datasets (15,000+ rows).
- Improved prediction accuracy by 18% after hyperparameter tuning and cross-validation.
- Evaluated model performance using confusion matrix, F1-score, precision, and recall.
- Automated end-to-end ML workflows using AWS SageMaker, Lambda, and S3, reducing manual deployment time by 40%.

Projects

1. AI Super Assistant

- Built an AI-powered automation assistant that executes real-world tasks such as food ordering, ride booking, and music playback using voice commands.
- Implemented intent detection using NVIDIA API and integrated LLM + RAG to generate step-by-step action plans.
- Developed a context-aware recommendation system to suggest food, songs, and videos based on user preferences, ratings, location, and time.
- Added predictive user behavior modeling to proactively recommend actions based on user habits.
- Implemented Android automation using Kotlin AccessibilityService to perform actions across apps automatically.

2. Smart Multi-Restaurant Delivery Optimization System

- Designed a multi-restaurant ordering system that allows customers to order food from multiple nearby restaurants in a single order.
- Developed a distance-based feasibility algorithm to allow orders only when restaurants are within a defined radius (0–3 km).
- Implemented route optimization logic to assign one delivery partner to pick up orders from multiple restaurants and deliver them efficiently to the same customer.
- Built a delivery time prediction model using distance, preparation time, and traffic conditions to improve delivery efficiency and reduce delivery cost.

Skills

- Languages & Programming:** Python, SQL
- ML & AI:** Scikit-learn, TensorFlow, PyTorch, RAG, NLP
- Data Analytics & Visualization:** Pandas, NumPy, Matplotlib
- Tools & Platforms:** Git, GitHub, Jupyter, Google Colab, VS Code

Certification

- [Data Science & Machine Learning](#) - Cranes Varsity, Bengaluru.
Trained in Python, RDBMS, Exploratory Data Analysis (EDA), Power BI, and ML, NLP
